AT A GLANCE

Oricus Semicon Solutions is an innovative Semiconductor Tools manufacturing company who, with almost 100 years of collective expertise, craft high tech bespoke tooling solutions for the global Semiconductor Assembly and Test industry.

From one-off customised products to large scale production, our R&D strength, precision manufacturing experience and problem-solving capabilities are impeccable. With a passion for engineering and customer oriented service, we deliver price competitive precision Semiconductor Tooling solutions to a global market with a local presence.

Oricus is made up of a global network of professionals with strong commitment and passion for our work. The company is managed and operated with a spirit of professionalism based on the foundation of integrity, equality and respect. We are determined, objective with a sense of ownership to deliver on our goals. We value our values, professionalism, passion, perseverance and our relentless pursuit to deliver value for our customers.

Oriented to Customer's needs

We excel at creating specials – one of a kind pieces, with one of a kind craftsmanship combining with the latest in manufacturing technology to produce micro precision tooling. Oricus can Design and Manufacture either one-offs or high volume orders to your unique specifications, from High Temperature resistant tools for Power Devices to tools with complex geometries for 3D Advanced Packaging.

Industry Leading Solutions

Our Technical Sales Consultants and R&D teams of seasoned Semiconductor Assembly and Test industry professionals will study your chip and package requirements and offer effective and competitive tooling solutions that will work right out of the box. Oricus has the solution to your tooling requirements. Leave it to us and you can focus on your key processes.

Research and Development

R&D is the cornerstone of our commitment to deliver market leading tooling solutions. Our Material Science know-how, coupled with our Manufacturing Expertise and knowledge on the latest demands of Integrated Circuits Packaging allow us to offer tools that maximizes productivity and minimizes downtime.

Bond Test

Bond Test. Product Families

Die Attach Test

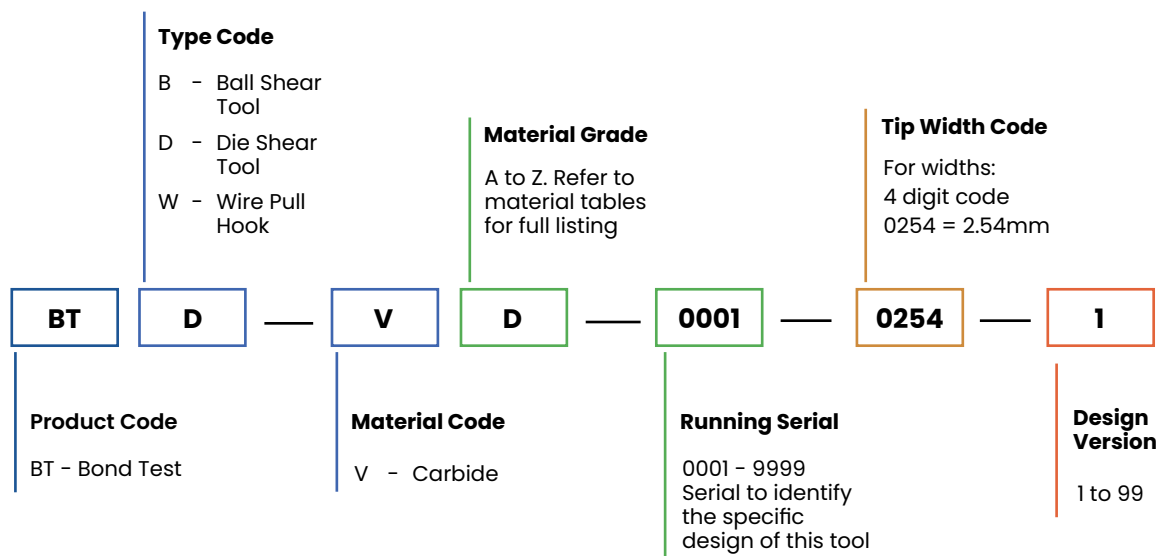

Die Shear Tools are attached to Die Shearing Test Equipment for testing the shear strength of the die and the substrate it is attached on.

Wire Bond Test

Shear strength of Wire Bonds and Solder Balls can be accurately tested using precision machined Ball Shear Tools.

Part Numbers And Ordering

Wire Pull Hook

Wire Pull Testing is an established methodology for testing the mechanical reliability of wire bonding interconnects used for Semiconductors. Load is usually applied at 90° perpendicular to the Device Under Test (DUT).

There are namely 2 methods of testing, Destructive and Non Destructive Testing. Destructive Testing tests the ultimate strength of the wire bond, until the point where the bond fails. Non Destructive Testing (NDT) applies a preload to the bonded interconnect for a certain duration. NDT is usually used for integrity and reliability test for high value devices.

Applications

Ball Bond interconnects
Wedge Bond interconnects
Ribbon Bond interconnects

Wires Compatibility

Gold
Aluminium
Copper
Silver

Equipment Compatibility

Royce
Nordson DAGE
XYZ
Rhesca

Material

Carbide

Part Number	ØA (mm)	X (mm)
BTW-LG-0001-001	Ø0.35	1.00
BTW-LG-0001-002	Ø0.40	1.00
BTW-LG-0001-003	Ø0.50	1.00
BTW-LG-0001-004	Ø0.60	1.00

Features

- Suitable for use in Die Shear Test Equipment from manufacturers such as Royce, Nordson DAGE, XYZ, Rhesca and more
- Available in a wide range of Stainless Steels and Tool Steels to suit your application
- Designed for both Destructive and Non Destructive test methods
- Used for Ball Bond, Wedge Bond and Ribbon Bond interconnects

Benefits

- Application specific designs for testing regular Wires, Ribbons and SMT Gullwing leads
- Customizable Wire Pull Hook materials to cater for Gold, Aluminium, Copper and Silver wires
- Micro Pull Hooks manufactured to suit the testing of very low loop height interconnects

MATERIALS

Oricus's extensive line of engineered materials specially developed and selected to offer optimal tooling performance for your specific Semiconductor Backend process. Our in-house materials are closely developed in partnership with Original Equipment Manufacturers with input from our customers. For externally procured materials, each material goes through a rigorous Quality Assurance and Performance Assessment programme before making it into our material list.

Oricus' in depth understanding and experience of materials allows us to formulate tooling solutions that work for you. As part of our value proposition, we study the conditions of your application and suggest the most appropriate material that meets your needs.
