AT A GLANCE

Oricus Semicon Solutions is an innovative Semiconductor Tools manufacturing company who, with almost 100 years of collective expertise, craft high tech bespoke tooling solutions for the global Semiconductor Assembly and Test industry.

From one-off customised products to large scale production, our R&D strength, precision manufacturing experience and problem-solving capabilities are impeccable. With a passion for engineering and customer oriented service, we deliver price competitive precision Semiconductor Tooling solutions to a global market with a local presence.

Oricus is made up of a global network of professionals with strong commitment and passion for our work. The company is managed and operated with a spirit of professionalism based on the foundation of integrity, equality and respect. We are determined, objective with a sense of ownership to deliver on our goals. We value our values, professionalism, passion, perseverance and our relentless pursuit to deliver value for our customers.

Oriented to Customer's needs

We excel at creating specials – one of a kind pieces, with one of a kind craftsmanship combining with the latest in manufacturing technology to produce micro precision tooling. Oricus can Design and Manufacture either one-offs or high volume orders to your unique specifications, from High Temperature resistant tools for Power Devices to tools with complex geometries for 3D Advanced Packaging.

Industry Leading Solutions

Our Technical Sales Consultants and R&D teams of seasoned Semiconductor Assembly and Test industry professionals will study your chip and package requirements and offer effective and competitive tooling solutions that will work right out of the box. Oricus has the solution to your tooling requirements. Leave it to us and you can focus on your key processes.

Research and Development

R&D is the cornerstone of our commitment to deliver market leading tooling solutions. Our Material Science know-how, coupled with our Manufacturing Expertise and knowledge on the latest demands of Integrated Circuits Packaging allow us to offer tools that maximizes productivity and minimizes downtime.

Die Attach

Ejection Systems

Standard Needles

Features tip designs in Flat Tip and Spherical Radius configurations. Used for Standard die ejection applications.

Twin Needles

Manufactured with Twin ejector tips of a common datum for optimal flatness during the die ejection process.

Quad Needles

Precision machined with a single datum for all 4 tips for Best-in-Class stability and performance of the ejection process.

Needle Holders

Needle Holder layout and positions designed based on your specific application requirements for optimal die ejection results.

Pepper Pots

Our Pepper Pots are designed with carefully considered layout and vacuum holes to ensure superior downwards vacuum suction force.

Part Numbers And Ordering

Needle Holder

Needle Holders are a critical interface component between the machine and the rest of the components of a die ejection system. Typically, Needle Holders are used in combination with Ejector Needles and Pepper Pots.

The layout and design of the needle positions on the Needle Holder are of paramount importance to the implementation of a successful die or device ejection process and operation. The overall Needle Holder design concept will be largely dependent on the die or device attributes. Our years of accumulated experience in the design of Die Ejection systems allow us to provide you with highly productive and fuss free Needle Holders.

Oricus manufactures a wide range of Needle Holders and Pepper Pots to fit a wide range of machines from OEMs such as Datacon, ESEC, ASM, Canon Bestem, Hitachi/Fasford, MRSI and more. Needle Holders are available in Spring Loaded, Side Fastening, Press Fit or Adhesive configurations, fully customizable to your process requirements.

Features

- Suitable for use in Die Bonders, Flip-Chip Die Sorters and Surface Mount Technology (SMT) machines.
- Available in various Stainless Steel and Aluminum grades that are suitable for Cleanroom environments.
- Needle holes made machined to exacting tolerances of perpendicularity, concentricity with minimum hole to hole offset
- A single Needle Holder can be designed and customized to fit a wide range of different die sizes

Benefits

- Our Needle Holders Tool Shanks are manufactured to perfectly into your machine's tool holders
- Plug-and-Play convenience of Ejector Needles into our Needle Holders
- Oricus's Die Ejection Systems consisting of Needle Holders, Ejector Needles and Pepper Pots offer high yield, high productivity with minimum downtime

Part Number	X (mm)	X1 (mm)	Y (mm)	Y1 (mm)

MATERIALS

Oricus's extensive line of engineered materials specially developed and selected to offer optimal tooling performance for your specific Semiconductor Backend process. Our in-house materials are closely developed in partnership with Original Equipment Manufacturers with input from our customers. For externally procured materials, each material goes through a rigorous Quality Assurance and Performance Assessment programme before making it into our material list.

Oricus' in depth understanding and experience of materials allows us to formulate tooling solutions that work for you. As part of our value proposition, we study the conditions of your application and suggest the most appropriate material that meets your needs.
