AT A GLANCE

Oricus Semicon Solutions is an innovative Semiconductor Tools manufacturing company who, with almost 100 years of collective expertise, craft high tech bespoke tooling solutions for the global Semiconductor Assembly and Test industry.

From one-off customised products to large scale production, our R&D strength, precision manufacturing experience and problem-solving capabilities are impeccable. With a passion for engineering and customer oriented service, we deliver price competitive precision Semiconductor Tooling solutions to a global market with a local presence.

Oricus is made up of a global network of professionals with strong commitment and passion for our work. The company is managed and operated with a spirit of professionalism based on the foundation of integrity, equality and respect. We are determined, objective with a sense of ownership to deliver on our goals. We value our values, professionalism, passion, perseverance and our relentless pursuit to deliver value for our customers.

Oriented to Customer's needs

We excel at creating specials – one of a kind pieces, with one of a kind craftsmanship combining with the latest in manufacturing technology to produce micro precision tooling. Oricus can Design and Manufacture either one-offs or high volume orders to your unique specifications, from High Temperature resistant tools for Power Devices to tools with complex geometries for 3D Advanced Packaging.

Industry Leading Solutions

Our Technical Sales Consultants and R&D teams of seasoned Semiconductor Assembly and Test industry professionals will study your chip and package requirements and offer effective and competitive tooling solutions that will work right out of the box. Oricus has the solution to your tooling requirements. Leave it to us and you can focus on your key processes.

Research and Development

R&D is the cornerstone of our commitment to deliver market leading tooling solutions. Our Material Science know-how, coupled with our Manufacturing Expertise and knowledge on the latest demands of Integrated Circuits Packaging allow us to offer tools that maximizes productivity and minimizes downtime.

Die Attach

Pick-Up Tools

Engineering Plastics Tools

Polymeric tips made from POM, PI, PAI and PEI compounds. Economical, replaceable and lightweight, with mid resistance to temperature and wear.

Non Ferrous Tools

Non-Ferrous tools provide excellent thermal transfer and even heat distribution across the tip area with optimized levels of hardness and toughness.

Alloy / Special Alloy Tools

Tools made from Superalloys, Stainless Steel and Tool Steels. For applications that require high resistance of bond force, temperature and wear.

Hybrid Tools

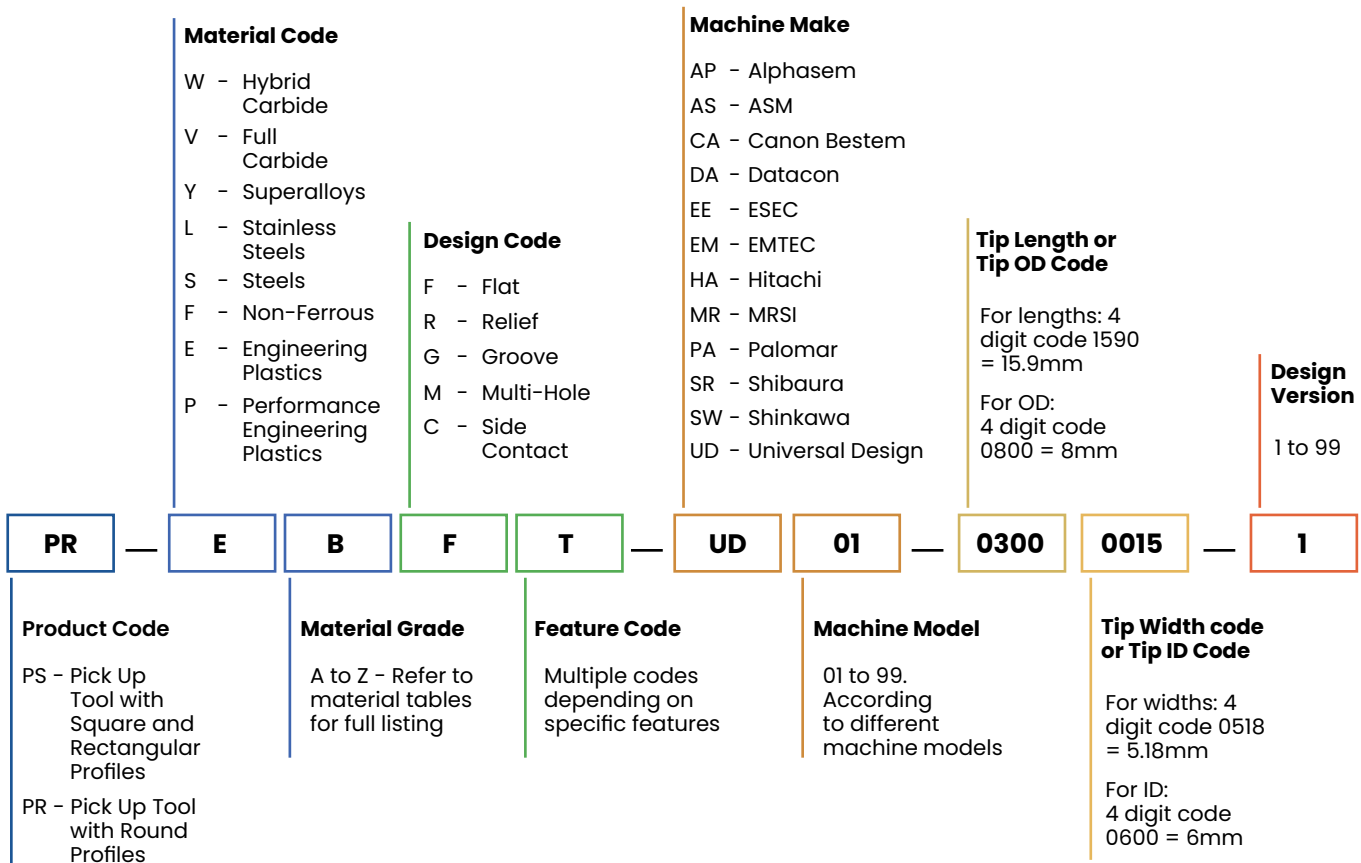

Hybrids offer the performance of Tungsten Carbide while delivering the cost effectiveness of Alloy Tools. Delivers superior Cost to Performance advantages.

Carbide Tools

Toughest tools in our product lineup for the most demanding applications with the highest requirements of strength, temperature and wear resistance.

Part Numbers And Ordering

Hybrid Tools

Matrix Design

Hybrid Carbide Matrix Tip is the superior solution for thin die applications with die thickness $\leq 0.1\text{mm}$. Tips used for Thin die applications requires stable vacuum force while maximizing tip to die surface contact area.

Our Matrix Tip design features multiple vacuum holes drilled on the surface of the tip, in a distributed matrix layout.

Hybrid Carbide Matrix Tips are manufactured with Alloy Steel tool bodies to cater to a wide range of machine tool holders. As compared to a Full Body Carbide Tool, Hybrid Tools are more economical and delivers a higher return on your investment.

Oricus manufactures a wide range of customized Carbide Matrix Tips with sizes and configurations designed to suit your application.

Features

- Maximum surface contact between tip and the die or device
- Can be made in Round, Square, Rectangular and Custom outer profiles
- Size and layout of the vacuum holes are fully customizable
- Tool body available in Alloy Steel for fitment to machines with magnetic tool holders
- Harder than Rubber, Engineering Plastics and Alloy Steel Matrix Tips
- Highest wear resistance amongst Rubber, Engineering Plastics and Alloy Steel Matrix Tips
- Highest temperature resistance amongst Rubber, Engineering Plastics and Alloy Steel Matrix Tips

Benefits

- Allows the application of well balanced and strong vacuum suction throughout the Pick and Place process to ensure the elimination of voids
- Matrix Tips offers enhanced surface contact as compared to Groove Tips, ensuring the uniform application of bond force of the die to the substrate
- Longest tool life compared to Rubber, Engineering Plastics and Alloy Steel Matrix Tips
- More cost efficient with shorter lead times as compared to Full Carbide Matrix Tips

MATERIALS

Oricus's extensive line of engineered materials specially developed and selected to offer optimal tooling performance for your specific Semiconductor Backend process. Our in-house materials are closely developed in partnership with Original Equipment Manufacturers with input from our customers. For externally procured materials, each material goes through a rigorous Quality Assurance and Performance Assessment programme before making it into our material list.

Oricus' in depth understanding and experience of materials allows us to formulate tooling solutions that work for you. As part of our value proposition, we study the conditions of your application and suggest the most appropriate material that meets your needs.
